

Advanced Design Practice (DIGM 6020)

Critical Evaluation

Testing Round One

Date: 14/05/26 - 16/05/26

Technique: Questionnaire

Responses: 4

Method

Google Forms was used to create a questionnaire, which was distributed through email and social media platforms. Totalling 1 demographic question, 5 Likert scales and a written answer; balancing quantitative and qualitative data. Unfortunately, the consenting forms were mistakenly omitted.

Concerning demographics, individual expertise was valued above all else, differentiating between students and professionals. Gender, ethnicity and age didn't seem relevant or helpful towards the project.

Analysis

A respondent mentioned several points for improvement, albeit vague: 'fix the lighting' was mentioned, but no comments specifying needed changes; the wood UV alignments, wood roughness and scale of the kitchen felt 'off' and 'too tight.'

The feedback for the lighting prompted experimentation, which led to making the lighting a touch softer, changing IES profiles and increasing the bloom effects.

Figure 1.1 - UV alignment on wood counter table.

Regarding the UV alignments, assuming this (see figure 1.1) was their point, this was intentional and remains true to the real-world reference. I agreed on the table being too reflective and the kitchen feeling cramped, which were changed for the final output.

Another respondent said 'the scene feels too linear' and 'artificial', mentioning to incorporate smaller details. Although, once again, a vague response, it prompted more research into

achieving realism in Unreal Engine (which will be discussed in the evaluation).

One respondent noted to add some cars or train sounds, reasoning that it would 'liven up the environment.' After receiving this feedback, I added different rain sounds hitting certain materials, distant trains, thunder claps and rain sounds from an interior.

Finally, a respondent suggested to add a van or push carts to the scene. I added a van model as suggested, which also sparked the addition of a vespa scooter, after confirming it's a common vehicle in Japan.

In summary, the participants found that the environment is convincingly set in Shinjuku, Tokyo; the level of details in the props and signage were mostly appropriate for the setting. Concerning the materials and textures, there were mainly positive results, indicating that they looked realistic and high quality, however some of the qualitative feedback suggested improvements. The sound received mixed responses, indicating a point for improvement. However, overall, the participants found the project visually engaging.

In summary, the participants found that the environment is convincingly set in Shinjuku, Tokyo; the level of details in the props and signage were mostly appropriate for the setting. Concerning the materials and textures, there were mainly positive results, indicating that they looked realistic and high quality, however some of the qualitative feedback suggested improvements. The sound received mixed responses, indicating a point for improvement. However, overall, the participants found the project visually engaging.

Testing Round Two

Date: 26/05/2026 – 02/06/2026

Technique: Questionnaire

Responses: 15

Disclaimer: All participants agreed to the consent form.

Method

This round had the same questions, however with some alterations. For the demographics, I added 'hobbyist' because self-taught individuals could offer unique insights, however I never received participants from this demographic. Fortunately, 2 professionals responded after I frantically added many people on LinkedIn with creative backgrounds. Changing the Likert scale from 5 points to 4 removes the middle ground, forcing the participant to agree or disagree, which provided clearer and more useable results.

Most people, myself included, don't want to spend too much time on questionnaires as seen by some responses — or rather lack of responses — therefore I thought it wise to only have one qualitative question and to keep it brief.

Upon reflection I think adding an age demographic may have been beneficial, because generally, you develop taste with age; furthermore, ethnicity could have been useful, however, only if I were able to obtain Japanese respondents to verify authenticity.

Analysis

Two student respondents said to vary some of the object positions inside the restaurant, reasoning that in reality no objects are perfectly aligned. I agree with these statements, I simply copied the bowls along one axis; adding some slight rotations and offset positioning would indeed increase realism.

A student respondent commented: 'it looks like it's just opened' and that I should add more assets such as plants and dirty piled dishes, suggesting that it would look more like it's about to close. I did experiment with house plants, however, I struggled to place them without clipping through the walls or other objects and so unincluded in the final output.

I mostly disagree with the assessment. Considering that the scene is set at night and being titled 'Last Call', prompts understanding that the restaurant is about to close — a shop just opened and one closing will look almost exactly the same; drawing from personal experience working in restaurants. A suggestion to add manga to the shelves was a welcomed addition — I was struggling to decide what to put on those shelves.

One creative professional, a Kent University alum, responded saying I should review the metals, specifically the specular (roughness). Additionally, the rocky walls were too flat and adding tessellation would remedy this; further mentioning that the exterior wall's bump map should be subtler and the water ripples looked low resolution.

These were insightful comments. Concerning the metal materials, I think I should have found clearer references; I used images of industrial kitchen tables (see figure 2.1), however references of the object in a suitable environment would have been more apt. Regarding the flat rocky walls, this was something I was aware of, however, since the camera is close to the object, the illusion breaks. To achieve a better result, I would sculpt the rocky walls in zBrush, but I didn't have time for that. The ripples resolution could be fixed by potentially increasing the texture's tiling, or having higher resolution source textures.

Figure 2.1 - Metal table reference image.

Two student respondents mentioned the camera shots, saying the movements were too slow and to add more variation. They didn't add specifics shots to incorporate, but I can see how they thought this; I only animated the camera positions and rotations, I could experiment with some rig rails and add some panning shots.

The other professional respondent mentioned 'the end of the cigarette stub looks abnormally deflated.' Honestly, I don't understand this comment. However, since this was an imported asset, maybe it would be beneficial to somehow differentiate between assets I created and sourced assets, which could have prompted different responses. The respondent also noted that the 'music and rain sounds could be faded in and out.' I already did this, however maybe the fade should have been a longer transition.

Conclusion:

Quantitative results were mostly positive. Similarly to the first round of testing, both students and professionals felt that the street was convincingly set in Shinjuku, Tokyo; in addition, the props and signage were appropriate. Furthermore, most agreed that the materials and texture were of high quality and looked realistic. Most agreed that the music and sound effects fit within the scene, however I received one student who strongly disagreed with this. Overall, the respondents, apart from one, thought the project was visually engaging.

The qualitative feedback suggested several improvements including: varying some object positions, reduce metal roughness, address the rock walls looking flat, tone down the bump (height map) on some objects, longer audio transitions, add manga to the shelves, and varied camera shots could make the project feel more engaging.

Reflecting on the questionnaire structure, it would have been beneficial to add 'please be specific', which could have prompted the respondent to provide clearer and more actionable feedback. Additionally, adding a section for lighting would have been extremely beneficial.

Self-Evaluation

Vision Vs. Outcome

This project was intended to demonstrate my graphic design and 3D abilities to employers, specifically in the games industry. Originally, I envisioned a dark, 3D game-ready environment set in a Japanese commercial alley. The aftermath of a massacre; dead gangsters sprawled across the street. A dark atmosphere. The outcome, however, was a calm, cosy, relaxing scene of a Japanese street and restaurant — quite a drastic shift in tone.

Why the change? I was unable to find appropriate and high-quality clothing to apply to the meta humans. Creating them would have constricted my time spent on the environment, reducing the environments' quality; therefore, I decided to omit the story elements, prioritising the environment and shifting to an object-driven narrative instead.

Game-ready environments demand optimised models. Low polygon counts and efficient textures. However, to optimise every building and prop is a lengthy process, so I decided to stop optimising everything, changing focus to the overall visual composition; though, having some optimised models still demonstrates my technical understanding.

Modular modelling is key in environment design for games. However, after looking at Google's street view, I realise that Japanese buildings are unique, which makes it difficult for modularity. My focus shifted to create several unique buildings, which prompted the idea and creation of the restaurant.

Challenges

Figure 3.1 - sharp edges on 3D models.

The main challenge was to achieve realism. In the first round of testing, a comment stuck with me: 'it looks artificial.' I agreed with the assessment, prompting further research into achieving realism. Sharp edges on models break realism (see figure 3.1), therefore I decided to bevel the edges; however, this created a new problem. Optimisation was already completed, bevelling them created geometry and UV issues; redoing work was not wise at this stage, as sound and lighting needed addressing. For future reference, retaining a quads version of models would be beneficial.

A common challenge was to prioritise what should be included. I wanted to add rain, puddles with ripples, cloth simulations for doorways, trees that realistically react to wind, parallax interior mapping the windows, the list could go on... I would start trying to create these things, realise that if I continue with this then I wouldn't have time for the other things I want to do. Instead, choosing the elements that affect the scene overall was prioritised, deciding on the rain and puddles being top priority.

Strengths

I believe the overall visual composition was a strength, especially the shot around the 50 second mark. The rain and puddles livened up the scene, and contrasted nicely with the interior, creating a sense of calm and cosiness. Furthermore, the rain drop texture on the vehicles and other objects added to realism. Another strength is that it's quite clear in what it is. It's understandably a Japanese street and restaurant, due to the signage and buildings. Having different types of rain sounds, especially the car rain sounds, and the rain from the interior, strengthens the project because it makes the scene more engaging.

Weaknesses

There are many points where realism is broken. Concerning the beer glasses, the refraction value was too high, the foam streaks did not show up clearly and it's missing shadows (see figure 4.1). The puddle ripples repeat in the same position, which should have been randomised. The rock walls looked too flat from certain camera angles, a sculpted model would work better. The chopsticks levitate above the bowls. The windows on some of the buildings looked too clean and should have some dirt, leaks or, at the very least, water droplets.

Figure 4.1 - Low quality beer mugs on table.

Figure 4.2 - Unaligned streaks on the building.

Figure 4.3 - Low quality texture on model.

The UVs on the cream-colored building had changed and the textures were not updated correctly (see figure 4.2). Some textures on the red building looked low quality (see figure 4.3). Considering that the ashtray had a close-up shot, it should have been higher poly. The reflections of the stacked plates on the kitchen sink are noticeably glitchy. The hot plate looks too clean and should have some slight wear. Some of the rain particles looked too big because the random size range was set too widely (see figure 4.4). The tree branches do not sway like the leaves do. There were some variations of colour for the lights in the surrounding buildings, however, more variation would add to realism.

Figure 4.4 - Rain particle sized to big.

The sound was lacking a bit too. Adding some more sound effects to create a soundscape, could have livened up the scene more and made it more engaging.

Improvements and Future Development

Of course, I would want to address the weaknesses to increase realism; also, I would address the feedback I received in the second testing round. I would specifically focus on bevelling the edges, and increase the texture quality, of some models, and to sculpt a rock wall for the buildings.

Like mentioned in the testing analysis, I would vary the camera shots, having pans and experimenting with rails and cranes; this would make the project more engaging and demonstrate creative vision.

Creating a document, or webpage, detailing the process, and differentiating between the models I've created and sourced, would demonstrate my 3D modelling ability clearly. This would include: turntables of models and wireframes; before and after images of optimisation; show the corresponding textures in 2D format, and some renders of the scene in detailed lighting mode.

Personal and Professional Development

This project has boosted my confidence in my ability to produce aesthetically pleasing content. It's made me more aware of developing a narrative through objects and sounds rather than characters and dialogue.

There was a point halfway through the project where I realised that since my intention was to demonstrate my graphic design and 3D modelling abilities, it may have been more apt to pursue a 3D advertisement project. I had an idea to create a modern advert for the Gameboy Advance. I decided against it, though, thinking I'm in too deep with my current project. I persisted and persevered with the project, however, my future aims will focus on 3D advertising, where 3D modelling and graphic design intersect.

Appendix

Round One: Pages 7 - 14

Round Two: Pages 15 - 74

If you could change one thing about this environment, what would it be and why? *

As of now, the scene feels too linear - to artificial in some sense. I feel like it would be better to instead to try and incorporate smaller details to help with this but i'm assuming that this is out of your scope.

If there's anything else further you would like to add, please do so here.

The camera shake felt a bit off, and the camera movement was kinda jagged at some points where it started to move in a completely different direction. Maybe some camera effects such as Depth of field would be nice, but I know this is focused on the environment. Also maybe add a glare node in the compositor and change it to bloom for the lighting to make it glow and pop more? - thx for filling out my survey btw :D

I'd add a bit of variety to the placement of some of the objects in the noodle shop, just to make it feel more lively (I know it's probably because they've just set up for the evening but even the smallest detail would do wonders)

If there's anything else further you would like to add, please do so here.

Nothing else to add, you did a smashing job! Love this

If you could change one thing about this environment, what would it be and why? *

Add some more "in-use" character like currently it looks like it just opened, even not to the public, I would add some more assets maybe some plants, maybe dirty piled up plates after clients like it's late evening and it doesn't have much clients and it about to close sort of thing. So they need to clean the place, maybe add breadcrumbs, the water drops in the entrance, like foot smudges of dirt on the floor. Maybe some kind of journals/ manga/ news shelves/corner. I know that in some Japanese izakaya they do separation board between people, so introverts can eat without people interrupting them.

If there's anything else further you would like to add, please do so here.

Rocio said last time about narrative. While it's fine to not have narrative, but I think she meant a backdrop story behind it, so you can think widen up the amount of assets in your scene, as I said, evening, rain, Tuesday, not much clients after 10 pm. Staff are closing down. So you can add some character to the place.

Maybe switch up the type of shots, so the length of them varies as it tends to be very slow moving camera shots, which does make sense since you're showcasing your attention to detail. I don't really have much I would change though

If there's anything else further you would like to add, please do so here.

Honestly just wanted to see more

Strongly Disagree	☐	☐	☐	☒	Strongly Agree

The overall composition and layout of the scene is visually engaging. *

	1	2	3	4	
Strongly Disagree	☐	☐	☐	☒	Strongly Agree

If you could change one thing about this environment, what would it be and why? *

Honestly nothing, it's dope, I guess perhaps I'd like to know what story it tells, but I get the gist.

If there's anything else further you would like to add, please do so here.

Nothing, good job

As the camera focuses on the Cigarette, the end of the cigarette stub looks abnormally deflated.

If there's anything else further you would like to add, please do so here.

Music and the rain sound can be faded in and out.

If you could change one thing about this environment, what would it be and why? *

I'd review the specularity of some of the metals so they're a little more reflective and less rough. I'd also try adding tessellation to the rocky walls as it's clear from the side that they're in fact flat, breaking the illusion. I'd also make the bump more subtle for some of the building exterior walls. Water ripples on the floor looked a little low res.

If there's anything else further you would like to add, please do so here.

Love to see the UE pipeline in action for students at Kent. They've come a long way since 2016 where I had to deal with Arnold in Maya. I opted for render man instead. Nice work!

If you could change one thing about this environment, what would it be and why? *

Only if you had extra time, but to add to the ambience, having people there interacting or one person working in the place. Really good project, this is just if you had longer time ofc

If you could change one thing about this environment, what would it be and why? *

Maybe add some condensation on the windows of the restaurant especially with the heat from inside reacting to the cool rain outside.

If there's anything else further you would like to add, please do so here.

In the first shot, the texture of the stone wall that the motorcycle/moped is leant on looks a little flat. The rain is amazingly realistic.

I would change how clean the kitchen is as there seems to be a meal just been made and eaten.

If there's anything else further you would like to add, please do so here.

Mabey some animated objects outside being effected by the environment (wind/rain)
